Mike:

EPA has been working with the State of Wyoming, the Tribes and the U.S. Geological Survey to conduct another round of sampling of the deep monitoring wells. This effort began in April. We expect to have quality-assured data from this sampling later this summer.

EPA stands behind our draft report and the methods used to collect and assess data from Pavillion monitoring wells. We have been consistent in our commitment to conducting a transparent, public and independent peer review of our data and preliminary findings. The draft report, along with the additional data collected from wells this year, will be open for public comment through October. After the public comment period, a peer review of the draft report will be led by a panel of independent scientists.

Rich,

Hi. I just listened to Tom Doll speak. He said that the state has concluded that EPA contaminated its own deep monitoring well in Pavillion with the drilling of the well. I'm working on a story. Is this anything you've responded to before?
